ONLINE PROCTORING SYSTEM

PROJECT DESCRIPTION:

Online proctoring has surged during the Coronavirus pandemic, and so too have concerns about the practice, in which candidates take exams under the watchful eyes (human or automated) of third-party programs. Candidate concerns are their privacy and increasing test anxiety via a sense of being surveilled. The project aims to provide a safe and user-friendly environment to take exams online to various locations for those who don't have access to campus. The project employs various machine learning models to reduce the burden on the admin to detect malpractice by the students on a large scale. The model verifies and authenticates the candidates taking the exam and continuously checks for any malpractices. This is done by analyzing video and audio that the model processes to verify the integrity of the student.

1. Customer or User expectations & Design Considerations

- User Friendly Design Interface
- Attractive and responsive application
- To reduce cheating in online exams
- To avoid verbal assistance
- To detect Remote access and dual device usage
- Anomaly detection.
- Exams conducted in a Well-organized way.

2. As a Designer identify the issues in design, add on /issues/enhancement in Prototype, storyboard design, ergonomics, Typography, Color, Navigation, Interaction Factors and international standards in the website / mobile app design

- **ISSUES**

- The usage of color should match with human emotions.
- It would have a proper color match and avoid unwanted navigations.

- **ADD ONs**

- Add required images to make the site much more attractive.
- Add some different colors for buttons.

- **ABOUT PROTOTYPE**

- Font style and size were perfect, it maintained readability.
- Navigation is good and the flow works well.
- All the modules were integrated in a good manner.

- **ABOUT STORY BOARD**

- Creativity is top notch and most of all modules were implemented.
- The tool chosen was good and it had many features to sketch what we had in mind.

STORY BOARD DESIGN

Web Design and Features

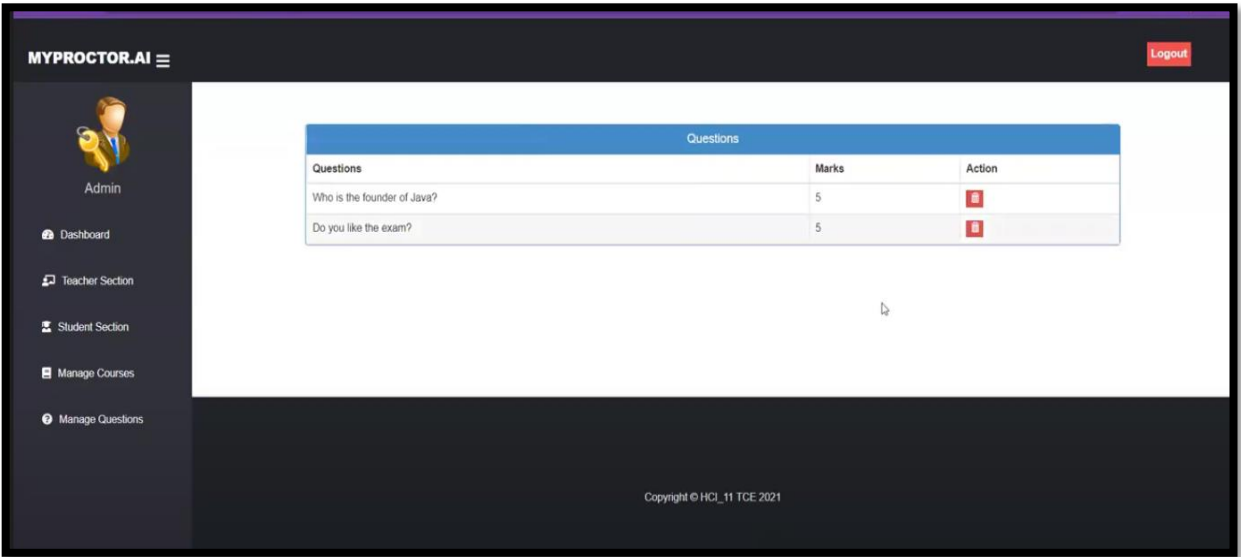

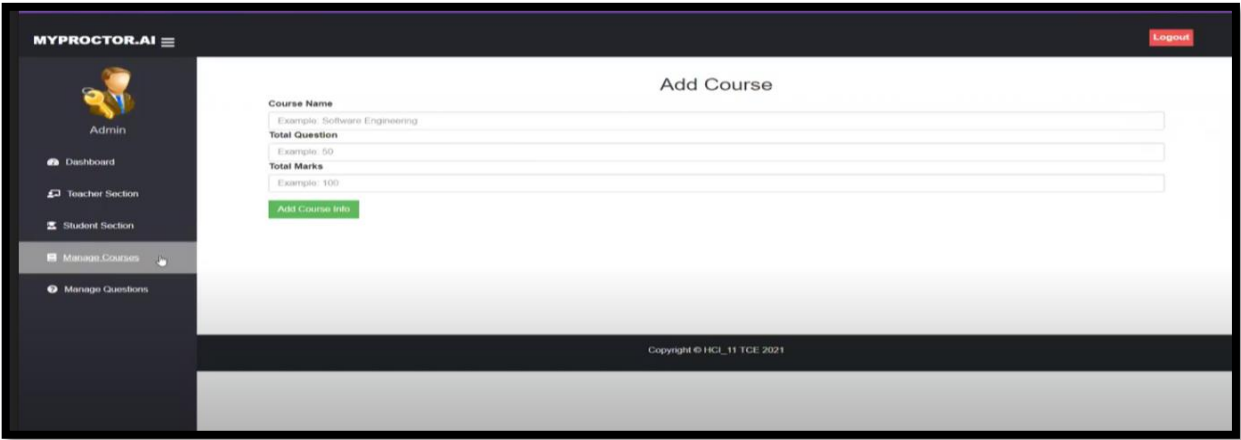

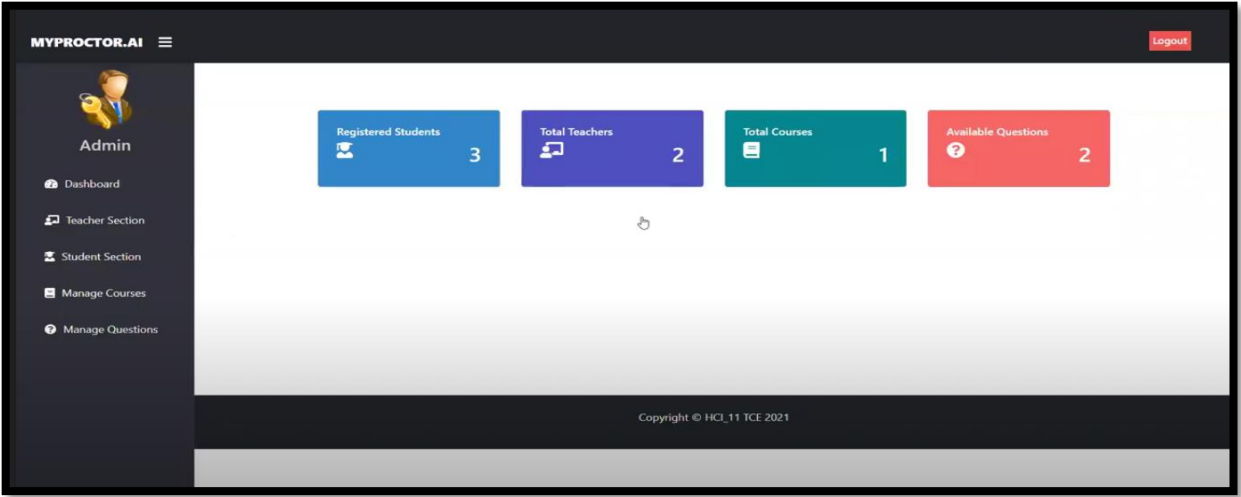

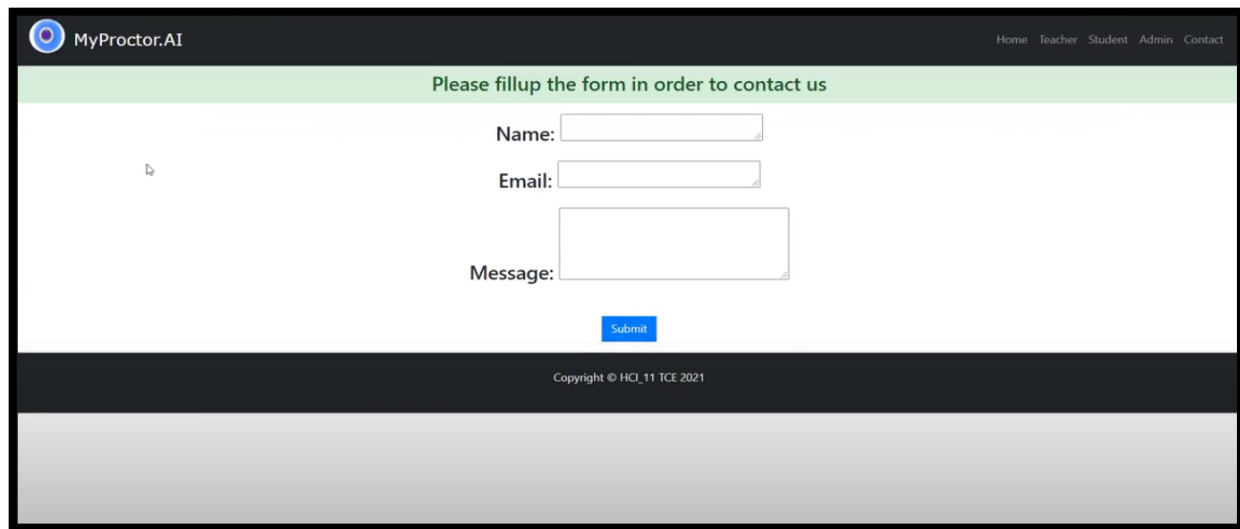

The Student Signup Form is displayed on a dark background. It includes a header with the MyProctor.AI logo and navigation links. The form fields are arranged in two columns: First Name, Last Name, Contact Number, Address, Username, and Password. A Profile Picture section with a "Choose File" button and "No file chosen" text is located below the Username field. A green "Sign Up" button is at the bottom left. The footer bar contains the copyright notice "Copyright © HCL_11 TCE 2021".

The Teacher Login Panel is centered on a dark background. It features a dark gray box with the title "Teacher Login Panel" in white. Inside the box are two input fields: the first contains the text "Prova" and the second contains "*****". A green "Login" button is positioned below the password field. The background of the page is a dark gray gradient. The footer bar contains the copyright notice "Copyright © HCL_11 TCE 2021".

The screenshot shows a web interface for MyProctor.AI. At the top left is the logo and name 'MyProctor.AI'. At the top right are navigation links: 'Home', 'Teacher', 'Student', 'Admin', and 'Contact'. Below the navigation bar is a green banner with the text 'Please fillup the form in order to contact us'. The form itself has three input fields: 'Name:', 'Email:', and 'Message:'. Below these fields is a blue 'Submit' button. At the bottom of the form area, there is a copyright notice: 'Copyright © HCL_11 TCE 2021'.

3. Evaluation with the Experts

(Faculty/Friends/Novice User)

- To change background color.
- Modify font color and make them uniform
- Add some more related to application

4. Survey type evaluation with minimum 3 persons (Technical/Non-Technical)

Can you cheat in a proctored exam?

12 responses

Do you think it is effective in all kinds of remote proctoring?

12 responses

Give your rating for the website based on the innovation level

12 responses

Rate about the responsiveness of the website

12 responses

- It is responsive
- It is not responsive
- Partially responsive and partially not responsive

Give ratings based on the typography applied

12 responses

Rate the UI design of the website

12 responses

So based on the survey analysis we are able to find that we need to work on the UI designs and also have to make some changes to satisfy all the HCI principles to get a better design outcome.

5. Error Handling and User Centric Design factors considered in the HCI Lab Project

❖ Error handling:

1. If the students need to change their selected answers they can change before the completion of the exams.
2. Teachers can edit the questions before publishing the test.
3. If the answer is found to be incorrect, Teacher can change the selected answer option for the question and assign marks to every student who has given the correct answer.

❖ User-centered design improves the user experience with the exact user specified requirements are well satisfied.

❖ For user centric design factors, we have considered using investigative methods and tools as surveys and interviews.

❖ Therefore, Google forms have been used to interact with the stakeholders and to collect their requirements.

❖ Based on the survey results, stakeholders suggested features and developments are added.

6. Disability people factors consideration future with theoretical information

- Since it is a website, there will be no concerns for people with any kind of disabilities.
- Large fonts, spaced out letters, minimum text, and high-contrast color schemes can simplify the visually impaired people testing experience.

7. Evaluate the successful and failure HCI project in general

Success:

- We have implemented this app and we have done all the things from scratch and the application looks simple and easy to use.
- The UI of the application is quite attractive and helps the user to access so it is user friendly.
- More of the functions of the app are implemented with appropriate UI Designs.
- This app will be a successful one when it is used by the right stakeholders/customers.

Failure:

- Although we have done a good simple UI Design since we have not considered all the UI standards such as the Typography and Interaction Factors needs to be much more standardized.
- Still some more functionalities need to be added.
